Summary

Artificial Intelligence Engineer and Machine Learning Engineer with strong expertise in developing predictive models, NLP solutions, and scalable AI systems. Skilled in Python and automation tools, with a passion for building intelligent, data-driven solutions that improve performance, enhance decision-making, and reduce manual effort through innovative AI-driven projects.

Education

Air University	Islamabad
Bachelor of Science in Artificial Intelligence	09/2023 – 06/2027
F.G. Sir Syed College	Rawalpindi
Intermediate in Computer Science (ICS)	11/2021 – 06/2023

Certifications

Deep Learning Specialization — DeepLearning.AI
Developing LLM Applications with LangChain — DataCamp
Retrieval Augmented Generation (RAG) with LangChain — DataCamp
Intermediate Deep Learning with PyTorch — DataCamp
Designing Agentic Systems with LangChain — DataCamp

Key Achievements

Innovative NLP Projects — Developed NLP and ML-driven projects, including a book recommendation system and a TED Talks chatbot, that enhance user interaction and information access.

Skills

Python · NLP · Machine Learning · Deep Learning · Data Science · Natural Language Processing · LLMs · Model Deployment · MLOps (Docker, Git) · Data Analysis

Experience

AI/ML Intern — Developers Hub Corporation

August 2025 – September 2025

- Worked on Artificial Intelligence and Machine Learning projects using Python.
- Assisted in developing and testing ML models for real-world applications.
- Performed data preprocessing, model evaluation, and experimentation.
- Gained hands-on experience with NLP, deep learning, and model optimization techniques.

Projects

AI Video Violence Detection System

A deep learning-based surveillance system for detecting violence in video streams.

- Built a spatio-temporal model using MobileNetV2 and BiLSTM for video classification
- Classified videos into normal, violence, and weaponized activity
- Optimized model for real-time and edge deployment

Semantic Book Recommender

A book recommendation system utilizing NLP techniques to enhance the user experience in discovering books.

- Built an NLP and LLM-powered book recommendation system
- Classified books based on emotional tone and semantic similarity
- Designed a user-friendly Gradio dashboard for interactive book discovery

TedPal: TED Talks Chatbot

A chatbot designed to provide rapid access to TED Talk summaries, enhancing learning and engagement.

- Developed TedPal, a RAG-based chatbot that delivers instant TED Talk summaries
- Eliminated the need to manually search and watch full videos
- Boosted user motivation and learning efficiency through AI-driven summaries

AI-Powered CRM Chatbot

A RAG-based CRM chatbot designed to retrieve and analyze structured banking campaign data through natural language queries.

- Developed an AI-powered CRM chatbot using FastAPI, Supabase, and JavaScript.
- Built a system capable of interpreting natural language queries and generating actionable insights from structured customer campaign datasets.
- Implemented vector search and retrieval workflows using Supabase for intelligent query handling.
- Deployed the application on a Linode VPS with CI/CD automation using GitHub Actions.
- Enabled users to query customer insights such as demographics, loan status, education levels, and account statistics in real time.
